Antimony in a WTC Dust Signature?

- Elevated in urine from NYC Firemen (Prezant report)
- Found in some WTC dust samples but not in others
- Wide range in WTC dust
- Not notably different from urban background dust

Progress on WTC Dust Signature Development

- Samples from four contaminated sites
- Samples being analyzed for proposed signatures
- Using samples to evaluate RJ Lee proposed signature

Background Characterization

- Need samples from outlying areas
- These samples will be used for signature and for NYC background characterization

Next Steps

- Need access for collecting background and additional WTC dust samples
- Can provide samples for testing any additional proposed signatures
- Will validate proposed signatures with contaminated and background samples
